

Lean practitioner

3 day course

Lean Practitioner training equips your teams with the tools to improve efficiency, reduce waste and drive continuous improvement activities

LEAN PRACTITIONER PROGRAMME

Our Lean Practitioners course introduces a range of 'classic' Lean tools, techniques, problem solving and running improvement projects.

We will provide a comprehensive introduction to the philosophy of Lean and how it applies to your work place. You will learn how to Process Map your operations in order to optimise value-added activities and reduce waste and non-value added activities. You will learn how to apply the principles of 'pull' processing to smooth the flow within your operations in order to improve efficiency and achieve 'right first time' by reducing defects. Your training will be supported with relevant exercises allowing you to practice the tools as you go along. We will look at different techniques to investigate Root Cause Analysis and generate robust permanent solutions through team work and collaboration. Finally we will review facilitation and change management skills necessary to organise events and achieve 'buy-in' from your colleagues for your continuous improvement initiatives.

TOPICS COVERED

- Introduction to Lean
- Process mapping and basic value stream analysis
- Waste analysis
- Visual management & 5S
- Problem solving
- Team building
- Running and facilitating Lean workshops

WHO SHOULD ATTEND?

Team members embarking on a business improvement journey.

BENEFITS TO YOUR ORGANISATION

- Solid, proven, practical training, coupled with the exploration of skills, tools and techniques from the Lean Practitioners toolset
- Staff with an ability to deploy Lean on small to medium scale projects, where the solutions are not immediately known
- Optional structured support from us at every stage to ensure sustainability of improvements
- Fast positive impact on your business and/or your processes that generates results, belief and momentum for your Lean Programme
